IN THE UNITED STATES PATENT AND TRADEMARK OFFICE BEFORE THE TRADEMARK TRIAL AND APPEAL BOARD

In the matter of Application Serial Nos. 85/249,167; 85/249,160; 85/976,151; 85/976,108

Marks: FON & FON plus Design

Published: March 20, 2012

FON WIRELESS LIMITED)
Opposer,)) Opposition No.
v.)
Fonality, Inc.)
Applicant.)

NOTICE OF OPPOSITION

Opposer, Fon Wireless Limited ("Opposer"), a United Kingdom limited company, with an office and place of business located at 8 Clifford Street, London W1S 2LQ, United Kingdom believes that it is or will be damaged by the registration of Application Serial Nos. 85/249,167; 85/249,160; 85/976,151; and, 85/976,108 for the mark FON in International Classes 9, 38, 41 and 42 and the mark FON plus Design in International Classes 9, 38, 41 and 42 hereby opposes registration of the marks to Fonality, Inc. ("Applicant").

As grounds for opposition, it is alleged that:

1. Opposer, Fon, was founded by Martin Varsavsky, a hugely successful entrepreneur and internet pioneer with the goal of free, ubiquitous WiFi for everyone. Today, Fon Wireless Limited is the largest WiFi community in the world, with over 4 million Fon WiFi spots and over 6 million users.

- Opposer Fon partners with the world's leading broadband providers, hardware manufacturers and Telco operators to offer Fon-ready products and services.
 Opposer Fon's partners include Belgacom, BT, Comstar-UTS Russia, SFR France, SoftBank Japan and ZON Portugal.
- 3. Opposer Fon has been using its FON (Stylized) and FONERA marks for over more than 5 year in connection with goods and services in International Classes 9 & 38, including but not limited to "computer software for wireless internet access used to load into wireless network devices, namely personal computers, and shared by a network of fidelity members and prepaid third party users" and "telecommunication services, namely providing high speed wireless access to the internet to end users at specific locations and other communication and data networks by utilizing personal computers, PDAS and other wireless devices". Annexed hereto and identified as *Exhibit 1* are copies U.S. Registration Certificates.
- 4. As a result of the unsolicited press coverage received by Opposer Fon, the word **FON** is readily identified and has become synonymous with Opposer Fon. Annexed hereto and identified as *Exhibit 2* are copies of unsolicited press coverage received by Opposer Fon.
- 5. Furthermore, Opposer Fon has received additional press coverage from such known publications as The Telegraph, WIRED Magazine, The Huffington Post, The Wall Street Journal, The New York Times, Dow Jones, USA Today, The Guardian Bloomberg BusinessWeek, CNBC and Money in addition to many more. Annexed hereto and collectively identified as *Exhibit 3* are copies of excerpts of above-mentioned publications.

- 6. Applicants seek to register the marks FON and FON plus Design to be used in connection with International Classes 9, 38, 41 & 42. The goods and services covered under this application are intimately similar to goods and services being used and sold by Opposer Fon.
- 7. Applicant's FON and FON plus Design marks are so confusingly similar to Opposer Fon's FON (Stylized) and FONERA registrations, that there is no doubt that consumers will be led to the mistaken belief that Applicant's goods and services originate from the Opposer Fon, or that these products are somehow sponsored, authorized or approved by Opposer, all to the detriment of Opposer in violation of Section 2(d) of the Lanham Act, 15 U.S.C. § 1052(d).
- 8. The registration by Applicant of the FON and FON plus Design marks will dilute and impair Opposer Fon's rights in its FON (Stylized) and FONERA marks. If Applicant is permitted to register the FON and FON plus Design marks, such registration will eventually result in the inability of Opposer Fon's FON (Stylized) and FONERA marks to function as an indicator of origin of its goods and services and will also create confusion in the marketplace as to the source of goods.

WHEREFORE, Opposer Fon respectfully prays that this Notice of Opposition be sustained and that the registration of Application Serial Nos. 85/249,167; 85/249,160; 85/976,151; and, 85/976,108 be rejected, and that the registration of the marks therein sought, for the goods therein specified, be denied and refused.

Please direct all correspondence in this matter to the undersigned.

Roll-out of the first 4G network in Belgium and strategic partnership with Fon

28-06-2011

Belgacom is today taking another step to realize its convergence strategy. Belgacom is rolling out Belgium's first 4G network and is entering into an important partnership with Fon, the largest Wi-Fi community in the world. This will result in an even more high-performance mobile network and, through the collaboration with Fon, Belgacom customers will be able to experience their fixed Internet experience while on the move. These two innovations will allow customers to use their services and applications with even greater ease while on the move.

Now more than ever, convergence is a hot topic. Thanks to the complementarity of its fixed and mobile network, Belgacom has everything it needs to offer true convergence. Belgacom offers its customers packs which combine mobile and fixed telephony, internet and television. To develop new convergent products and services, Belgacom concludes various partnerships such as with manufacturer Samsung or, today, with Spanish company Fon. Belgacom also continuously invests in its fixed and mobile network, giving customers simple, seamless access to their services and applications, both at home and while on the move. Usage of the different networks is thus becoming increasingly mixed up, without the user being aware of it.

Belgacom rolls out first 4G network in Belgium

Belgacom is the first Belgian operator to start rolling out 4G. The fast 3G network will be extended with 4G or LTE technology. This will allow customers to use their mobile data applications with even greater ease on their smartphone, laptop or tablet. A limited group of Belgacom professional customers will start to use 4G as from now. They will be equipped with 4G USB sticks for laptop use. Belgacom will launch a commercial offer as soon as there are enough devices on the market that support 4G and there is sufficient demand from consumers and companies.

4G enables data traffic to be transferred at very high speed, up to 10 times faster than 3G. The downloading of data will be super-fast. It will be possible to stream a video on a smartphone, laptop or tablet immediately, without any download interval. Moreover, 4G will considerably increase the capacity of the mobile network so that the increased use of mobile services and solutions will be absorbed without any problem. Belgacom is using the existing 1.8 GHz frequency band for the 4G roll-out and provides 4G coverage in Hasselt, Mons, Waver and the industrial park of Haasrode.

Partnership with Fon, the largest Wi-Fi community of the world

Belgacom attaches great importance to concluding partnerships. It is important to be open to partners in order to develop new applications and services.

The partnership with Spanish company Fon (www.fon.com) will allow Belgacom this year to build the largest Wi-Fi community in Belgium. That, combined with Belgacom's mobile network, will enable customers to enjoy an optimal Internet experience in Belgium and abroad.

The principle behind the Belgacom Fon Wi-Fi Community is simple: Belgacom customers will open up their fixed Internet connection at home in a secured way to other members of the Fon community via the b-box (wireless modem of Belgacom). We will create 2 separated access point on one single b-box, one private for the customer's needs and one public for sharing. By doing this, we will build a real users community in Belgium with several hundreds of thousands of users. A simply registration gives Belgacom customers access to this Wi-Fi network en will be able to experience their fixed Internet experience when on the move, in Belgium and abroad. Currently, the Fon Community has more than 4 million members worldwide. Belgacom will offer this service to its internet customers before the end of the year.

Fon and Belgacom Announce WiFi Partnership in Belgium

BRUSSELS & MADRID--(BUSINESS WIRE)--Fon, the world's largest WiFi network, and Belgacom, Belgium's largest telecommunications company, today announced they have partnered to create the largest WiFi community in Belgium. In addition to WiFi access in Belgium, Belgacom internet customers will get global access to the more than 4 million hotspots in Fon's global WiFi network. Belgacom will add Fon's revolutionary WiFi-sharing technology to its equipment before the end of the year.

Martin Varsavsky, Fon CEO and founder, said:

"We're thrilled to be partnering with Belgacom to bring Fon WiFi to Belgium on a major scale. We love Belgium, and we can't wait to introduce Belgacom customers to the largest WiFi community on the planet."

Didier Bellens, Belgacom President and CEO, said:

"Thanks to our partnership with Fon, Belgacom will create the largest WiFi Community in Belgium. Belgacom internet customers can all become members of the WiFi community and so benefit from free WiFi access at more than 4 million hotspots worldwide, from the UK to Portugal to Japan, everywhere Fon members are sharing broadband internet with the community."

"We're thrilled to be partnering with Belgacom to bring Fon WiFi to Belgium on a major scale. We love Belgium, and we can't wait to introduce Belgacom customers to the largest WiFi community on the planet."

Fon technology makes it possible to broadcast two powerful, dedicated WiFi signals from a broadband internet source. One signal is encrypted and private. The other signal is public but only accessible via password to registered members of the Fon community.

About Fon:

Fon CEO, entrepreneur and internet pioneer Martin Varsavsky founded Fon in 2006 with the goal of free, ubiquitous WiFi for everyone. Today, Fon is the largest WiFi community in the world, providing WiFi at over 4 million Fon hotspots and to over 6 million users. Fon partners with the world's leading fixed and mobile Telcos, hardware manufacturers and service providers, all who share the vision of a joint WiFi community. Fon's investors include Atomico, British Telecom, the Coral Group, Google, Index Ventures, Sequoia Capital and Skype. For more information:

About Belgacom:

The Belgacom Group [Euronext: BELG]. Drawing on its solid experience as Belgium's national telecom operator and the multiple talents of its teams, the Belgacom Group is the main provider of integrated telecommunication services in Belgium. Thanks to its continuous investments in cutting-edge technology, Belgacom is able to offer its private and professional customers telephony, Internet and television services around the clock, irrespective of location and the access device used. For the fiscal year ending 31 December 2010, the Group posted a total revenue of €6.603 billion and a net operating profit before depreciation and amortization (EBITDA) of €1.984 billion.

New ZON@FON Campaign

4 Million hotspots throughout the world

ZON is launching a new campaign to publicise its ZON@fon service, the largest WiFi network in the country. As its service hits 400,000 hotspots in Portugal and over 4 million across the planet, ZON is launching a multimedia campaign to bolster the company's leadership in free internet access away from home and prove the fame and superiority of its wireless network. Another 100,000 hotspots have come online in Portugal, and a million in other parts of the world, since March 2010, when the first service campaign was launched.

Reusing the slogan "Your aerials are always up with ZON@FON" the campaign takes a young, innovative stance, capitalising on the fact that you can get free access to the biggest WiFi network in the country with no time or usage limits, through ZON.

The campaign is to be run on TV, web, urban publicity furniture, multibanco (ATM) and in cinemas. On the TV it will be integrated into self-advertising on the FOX, AXN and Fox Life channels. This innovative, original format will allow the product to be aimed more directly at the target population. The cinema campaign will be shown in eight national multiplexes that offer ZON Net customers free net access.

About ZON@FON

The ZON@FON service was first launched in July 2008 through a partnership between ZON and the Spanish company FON. The first WiFi district in Portugal was set up in the Campo de Ourique, Lisbon, in October 2008.

The network currently has over 400 thousand active hotspots making Portugal one of the countries with the largest free WiFi networks while ZON customers have the largest WiFi community in the world.

Only ZON runs a net like this in Portugal and it is free for Internet service customers who own compatible equipment (e.g. the ZON HUB router) associated to a laptop, tablet or smartphone.

The location of all national and international hotspots can be found on zonfon.pt.

May 12, 2011 01:00 PM Eastern Daylight Time

Fon Tops Four Million WiFi Hotspots, Enjoys Strong Growth

MADRID--(BUSINESS WIRE)--Fon today announced it has over four million Fon hotspots available to users worldwide. The world's largest WiFi community expanded its network by 30%, up from three million hotspots at the beginning of the year.

Martin Varsavsky, Fon CEO and founder, said:

"Four million hotspots is an amazing figure and proof that the Fon model works. Together with the spike we are seeing—one million new hotspots this year alone—the Fon network is achieving the footprint and rapid growth we have dreamed of. In just four months, we've added more hotspots to the Fon network than other WiFi networks—iPass (500K), Boingo (325K), Trustive (220K) and KT (57K)—offer to their customers in total."

Fon produces 802.11n Fonera WiFi routers that when connected to broadband make it possible to broadcast two powerful, dedicated WiFi signals. One signal is encrypted and private. The other signal is public but only accessible via password to registered members of the Fon community. Fon also builds this WiFi technology directly into its Telco partners' equipment.

You can become a member of the Fon community by buying a Fonera once or by joining without charge through Fon's partners, including BT, MTS Russia, SFR France, SoftBank Japan and ZON Portugal. Non-members can also connect to the Fon network worldwide by purchasing affordable access passes at Fon hotspots.

About Fon:

Fon CEO, entrepreneur and internet pioneer Martin Varsavsky founded Fon in 2006 with the goal of free, ubiquitous WiFi for everyone. Today, Fon is the largest WiFi community in the world, providing WiFi at over 4 million Fon hotspots and to over 6 million users. Fon partners with the world's leading fixed and mobile Telcos, hardware manufacturers and service providers, all who share the vision of a joint WiFi community. Fon's investors include Atomico, British Telecom, the Coral Group, Google, Index Ventures, Sequoia Capital and Skype. For more information: www.fon.com

Fon Raises €10M in New Funding Led by Atomico

SUCCESS OF PUBLIC WIF! NETWORK SOARS, BOOSTED BY TELCO PARTNERSHIPS AND SMARTPHONE USE

Mobile World Congress 2011

MADRID--(BUSINESS WIRE)--Fon, the world's largest WiFi network, announced today at the Mobile World Congress in Barcelona, that it has secured €10 million (\$13.5 million) in new funding led by Atomico, the venture capital firm founded by Niklas Zennström, co-founder of Skype. Coral Group and other existing Fon investors also contributed to the round designed to help Fon take advantage of the growing demand for WiFi from smartphone and tablet users, and to expand their efforts in the US and elsewhere. The funding follows previous rounds, which raised a total of more than €40m since the company was founded by serial entrepreneur Martin Varsavsky (Jazztel, Viatel) in 2006.

Fon, which features Fonera routers that let users connect to WiFi at Fon hotspots anywhere in the world for free in exchange for sharing a bit of Fon WiFi at home, recently announced its WiFi network has grown to 3.35 million hotspots. This is an increase of more than 200% year-on-year. Fon sold about 1.6 million routers in 2010 contributing to revenues of €28 million, up from €5 million in 2009.

Martin Varsavsky, Chairman and founder of Fon, said:

"I have built six technology companies, and what sets Fon apart is the caliber of its investors. We could have done an outside round but as an entrepreneur it gives me a great feeling to have the continued support of our existing investors."

"I have built six technology companies, and what sets Fon apart is the caliber of its investors. We could have done an outside round but as an entrepreneur it gives me a great feeling to have the continued support of our existing investors."

Niklas Zennström, CEO of Atomico, said:

"This is what we love at our venture capital firm: working out which companies have the ability to scale using new technology and are led by remarkable management teams, and then helping them thrive. Fon has a unique business model using a crowdsourcing approach to provide high-speed internet on the move. Today's announcement is great news for Fon and the millions more people who are set to use it."

Fon produces 802.11n Fonera WiFi routers that when connected ADSL/broadband make it possible to broadcast two dedicated WiFi signals. One signal is encrypted and private. The other signal is public and accessible via password to registered members of the Fon community. Fon also builds its WiFi technology directly into its telco partners' CPEs, including BT in the UK, MTS-Comstar Russia, SFR France and ZON Cable Portugal.

Fon also has an agreement with SoftBank, the innovative Japanese mobile operator. The company uses Fon's WiFi routers together with the iPhone to give its mobile customers faster internet access and reduce the load on its mobile network. Similar deals with mobile operators elsewhere are expected.

Notes to Editors:

About Fon:

Fon was founded in 2006 by entrepreneur and internet pioneer Martin Varsavsky with the goal of free, ubiquitous WiFi for everyone. Today, Fon is the largest WiFi community in the world, providing WiFi at over three million Fon hotspots and to over six million users. Fon partners with the world's leading fixed and mobile Telcos, hardware manufacturers and service providers who share the vision of a join WiFi community. Fon's investors include Atomico, British Telecom, the Coral Group, Google, Index Ventures, Sequoia Capital and Skype. For more information: www.fon.com

About Atomico:

Atomico is a leading international venture capital firm formed in 2006 by Niklas Zennström, a successful serial-entrepreneur and co-founder of Skype, Kazaa, Rdio and other companies. Atomico seeks to deliver outsized returns to investors by being the partner, and investor of choice, for fast-growing technology companies that will become global category winners. Atomico has to date invested in more than 40 companies on three

continents, and in March 2010 launched its second fund, the \$165m institutional fund Atomico Ventures II. Atomico is headquartered in London with offices in São Paulo and Hong Kong. For more information: www.atomico.com

Fon Tops Three Million Hotspots Globally, Expands Lead as the World's Largest WiFi Network

Mobile World Congress 2011

MADRID--(BUSINESS WIRE)--Fon today announced it has surpassed three million hotspots worldwide. With 3.35 million hotspots to-date, Fon has grown by more than 200% year-on-year and has extended its lead as the world's largest WiFi network, well ahead of its main competitor Boingo, a WiFi aggregator that currently hosts 211,000 hotspots. Fon revenues have also grown significantly, ending 2010 with €28 million, up from €5 million the year before. Fon attributes its growth to the surge in use of WiFi devices, and attributes its giant lead over other networks to its free WiFi proposition. Fon lets users connect to WiFi at Fon hotspots anywhere in the world for free in exchange for sharing a bit of Fon WiFi at home.

"Fon now has well over three million hotspots; that's triple our size just one year ago, and about six times larger than the Boingo, iPass and T-Mobile WiFi networks all combined," said Martin Varsavsky, Fon's founder and CEO. "As many more people purchase tablets and smartphones in the coming year, and as operators choose Fon WiFi to offload the fifty-fold increase in data traffic these users are expected to generate by 2015, we expect our community to continue to grow with no end in site."

Fon produces 802.11n Fonera WiFi routers that when connected ADSL/broadband make it possible to safely broadcast two powerful, dedicated WiFi signals. One signal is encrypted and private. The other signal is public and accessible via password to registered members of the Fon community. Fon also builds its WiFi technology directly into its Telco partners' CPEs.

"As many more people purchase tablets and smartphones in the coming year, and as operators choose Fon WiFi to offload the fifty-fold increase in data traffic these users are expected to generate by 2015, we expect our community to continue to grow with no end in site."

You can become a member by buying a Fonera once or by opting in to the Fon service for free, courtesy of a Telco partner. Partners include BT, MTS (Comstar-UTS) Russia, SFR France, SoftBank Japan and ZON Portugal. Non-members can connect to the Fon network buy purchasing affordable access passes.

Fon will be at the Mobile World Congress in Barcelona, February 14-17, Hall 7 Stand 7A72, to demonstrate how the Fon WiFi network and the Fonera SIMPL router help mobile and fixed operators reduce churn, offload data traffic and generate new revenue streams.

Fon was founded in 2006 by entrepreneur and internet pioneer Martin Varsavsky with the goal of free, ubiquitous WiFi for everyone. Today, Fon is the largest WiFi community in the world, providing WiFi at over three million Fon hotspots and to over six million users. Fon also partners with the world's leading broadband providers, hardware manufacturers and Telco operators to offer Fon-ready products. Fon's investors include British Telecom, the Coral Group, Google, Index Ventures, Sequoia Capital and Skype.

Fon Sells 2 Million New Fonera SIMPL WiFi Routers to Telcos Looking to Ease 3G Overloads

MADRID & NEW YORK--(BUSINESS WIRE)--Fon, the world's largest WiFi network,today announced it has sold 2 million of its latest Fonera SIMPL WiFi router to leading Telcos. The SIMPL, a palm-sized WiFi router targeted towards smartphone and tablet-PC users, is now also available directly to end-users for just \$49/€39 at fon.com, making it one of the lowest priced 802.11n routers in the market.

"People want to have fun on their smartphones, but are limited by 3G data restrictions," said Martin Varsavsky, Fon CEO. "With the Fonera SIMPL, when people connect to Fon WiFi at home or on the go, they can listen to Spotify, stream YouTube videos, and download and install heavy applications in a way that's fast, simple and useful, without eating up their 3G credit or straining 3G networks."

Fon pursues two partnership models: one for Fixed Telcos who integrate the Fon WiFi sharing feature into their own DSL or Cable modems, and the other for Mobile Telcos who distribute Fon routers to their subscribers. The SIMPL is especially attractive to mobile operators looking for ways to offload heavy data traffic from congested 3G networks. Fon partners with leading companies including British Telecom, MTS-Comstar Russia, SFR France, SoftBank Japan and ZON Cable Portugal.

people connect to Fon WiFi at home or on the go, they can listen to Spotify, stream YouTube videos, and download and install heavy applications in a way that's fast, simple and useful, without eating up their 3G credit or straining 3G networks."

"With the Fonera SIMPL, when

Customers who receive the SIMPL from a mobile operator, or buy it online, will be asked to plug the router into their fixed internet connection at home or work. After a quick registration process, the user will have Fon WiFi access at home and on the go at close to 3 million Fon Spots.

Fon also offers several connection solutions for the SIMPL to assist users who want a hassle-free connection to Fon WiFi at home and on the go. Smart devices can be easily configured to connect automatically to the public Fon WiFi signal whenever one is within range. Fon offers downloadable connection applications for devices ranging from the Android and Blackberry, based on the WISPr recommendation from the WFA, to the iPhone. New WPS functionality allows users to easily connect smart devices to their private WiFi signal with the touch of a button on the back of the SIMPL.

Fonera SIMPL comes equipped with wireless 802.11n, ideal for accessing media-rich content and transferring files faster. The SIMPL also features a powerful antenna, allowing for a better WiFi connection, WPA encryption, and a new quick setup that makes it easy to get Fon WiFi right out of the box. The SIMPL creates two WiFi signals (SSIDs), one private and one public, allowing users to safely share a bit of their broadband connection in exchange for free WiFi access at all other hotspots throughout Fon's global WiFi network.

The new Fonera SIMPL, includes:

- * 1 WAN Ethernet port (for ADSL/Cable modem)
- * 1 LAN Ethernet port (for PC)
- * 1 SSID (Open, WEP, WPA, WPA2)
- * 1 SSID (Fon network)
- * 802.11n (150 Mbps)
- * 802.11b/g (54 Mbps) compatible
- * Detachable, external antenna

FON and Devicescape Collaborate to Provide Easy WiFi Connectivity

(Market Wire Via Acquire Media NewsEdge) SAN BRUNO, CA and MADRID, SPAIN --(MARKET WIRE) -- 01/27/10 -- Devicescape and FON Wireless Ltd. (FON), two WiFi technology innovators, today announced a partnership to ensure easy WiFi connections everywhere and with any device.

During the first phase of the partnership, Devicescape is giving FON users free access to all Devicescape Easy WiFi clients. In the next phase Devicescape will deliver a unique FON branded Easy WiFi application designed to give Nokia smartphone users hassle-free access to WiFi. The FON Easy WiFi application will allow its customers to connect automatically to the more than half a million hotspots in the FON WiFi network without the inconvenience of entering user IDs and passwords in a browser.

With this agreement, FON and Devicescape join forces to ensure the best possible WiFi experience for FON users. FON will launch the FON Easy WiFi application in Germany together with its partner, mobile operator E-Plus.

With more than 20 million subscribers, E-Plus is one of Germany's leading mobile operators and smartphone distributors. FON remains unique in that it is the largest WiFi community in the world and it offers its customers free WiFi access at FON hotspots across the globe.

"WiFi has not only shown it's here to stay in the world of laptop, consumer device and enterprise connectivity, but it is proving itself vital for mobile platforms as well," said Martin Varsavsky, FON CEO. "Naturally people will want to connect seamlessly to WiFi, no matter the device, and we are happy to partner with Devicescape to develop this together." "Over the years, Devicescape has stayed focused on its goal to deliver simple, seamless and secure WiFi connectivity to our customers worldwide," said Dave Fraser, Devicescape CEO, "We are excited to work with yet another trailblazer in the wireless world, and we look forward to helping FON customers achieve one-click WiFi connectivity." FON customers interested in downloading Easy WiFi or individuals interested in joining FON should visit www.fon.com.

Device manufacturers and service providers looking to deliver Easy WiFi should contact dsbizdev@devicescape.com.

About Devicescape Devicescape is the leader in Easy WiFi. The company has worked with device manufacturers and service providers since its inception and has hundreds of design wins in the best WiFi products. Easy WiFi allows for the creation of superior products which are powerful, yet easy to use and compatible with a global network market.

Skype Launches WiFi Hotspot Operator Partnership Program with Leading WiFi Providers

Skype Access Available in 500,000 WiFi Hotspots Globally

Free WiFl in Spain through Skype Access for the Week of Mobile World Congress

Mobile World Congress 2011 Mobile World Congress 2011:Skype

BARCELONA, Spain--(BUSINESS WIRE)--Skype Access, pay-as-you-go Internet that uses your Skype Credit to get online, has officially launched a partner program for WiFi hotspot operators. Leading WiFi hotspot providers around the globe including BT Openzone, Fon, Tomizone and others have signed on to provide Internet access for consumer and business users on-the-go using Skype.

With one click, Skype users can connect to the Internet through a WiFi operator partner in over 500,000 hotspots around the globe including 500 airports, 30,000 hotels and numerous cafes, trains, planes, offices buildings, and convention centers. Whether in a neighbourhood cafe or in the airport on a business trip, you can quickly connect to the Internet for voice and video calls, email, or simply surfing the web.

In celebration of Mobile World Congress 2011 in Barcelona this week, Skype Access will be free to use from 0001 CET on the 14th February 2011 to 2359 CET on the 18th February 2011 across the whole of Spain.

Rather than paying costly per day or per hour Internet access fees, Skype Access allows you to pay per minute using Skype Credit to control your costs at rates starting at £.04 /€.05/\$.06per minute**. All you need is a connection to a Skype Access compatible hotspot and the latest version of Skype for Mac or Windows.

Through the Skype Access partnership program, WiFi operators are able to generate additional revenues from untapped users who prefer pay-as-you-go models versus traditional vouchers. Partnering with Skype provides operators access to Skype's 145 million average monthly connected users*who are communicating with their friends, family and colleagues both at home and while travelling.

Skype Access partners include:

BT Openzone - The UK's largest WiFi hotspot provider with a network of two million hotspots

Fon - The world's largest WiFi network with over 3.35 million Fon Spots across the globe

M3 Connect - WiFi provider in Germany with hotspots in many hotels, fairgrounds, airports and places like the German Stock Exchange

Row 44 - Provides the world's leading in-flight broadband platform to commercial airlines around the world

Skyrove - WiFi hotspot solutions for Guesthouses, Hotels and Coffee Shops throughout South Africa.

Spectrum Interactive - Specializes in offering WiFi for the travel and media sector including airports and hotels across the UK

Tomizone - WiFi provider in Australia, New Zealand and the South Pacific

Vex - Offers WiFi services in thousands of locations around the world including South America

- * For three months ending 31 December 2010 excluding users connected via joint venture partners.
- **Pricing inclusive of VAT

About Skype

Skype is a communications platform provider whose purpose is to break down barriers to communication. With an Internet-connected device, families, friends and colleagues can get together for free with messaging, voice and videe. At low cost, they can also call landlines or mobiles

virtually anywhere in the world. Skype has recently introduced group video, allowing groups of more than two people to do things together whenever they're apart. Skype was founded in 2003 and is based in Luxembourg. Skype can be downloaded onto computers, mobile phones and other connected devices for free at www.skype.com.

Fon Partners with Jungo to Extend Reach and Scope of Global Wi-Fi Sharing

- Fon implements Jungo security software framework
- Allows more users to become part of the Fon Wi-Fi sharing community
- Move opens up new business models for operators
- Fon can be implemented on Jungo's vast deployment base

LONDON--(BUSINESS WIRE)--Jungo Ltd., an NDS Group company and a leading provider of software solutions for residential gateways, today announced that its OpenRG, residential gateway software, now supports Fon's Wi-Fi sharing technology. Jungo is now able to deploy Fon compatibility across multiple devices for any operator or service provider that has deployed its OpenRG unified gateway software, enabling a range of different business models associated with the Fon service.

With over 30 million gateways deployed globally, partnering with Jungo greatly extends the reach of the Fon service - already the world's largest Wi-Fi sharing community. The move will allow operators and ISPs to offer new ways for users to access broadband on the go. Subscribers who opt-in to securely share a small portion of their overall bandwidth with other Fon users can make free use of Fon hotspots around the world to access the same WiFi enabled services they do in-home.

"Fon has built the world's largest WiFi network with over 3 million hotspots, and Telcos, ISPs and manufacturers are increasingly looking for ways to give their customers access to it," said Alex Puregger, Fon's COO. "We are pleased to be working with Jungo whose unified gateway software radically eases deployment of Fon technology to operators and helps grow our network faster."

"As operators look at new ways of delivering on the promise of unlimited internet access in and out of the home from a growing number of connected devices, Fon's relevance is quickly increasing"

Opportunities exist for operators to build their own business models around Fon's growing network of Wi-Fi hotspots. By using Jungo's security software, operators are able to differentiate between subscriber and non-subscriber access, increasing stickiness by offering a value-added service for existing customers and allowing them to charge non-Fon community members for access. Additionally, operators are able to take advantage of the fact that Wi-Fi has the potential to work as an alternative channel for data to mobile, helping to reduce traffic on mobile networks and potentially earning additional revenue for operators.

"As operators look at new ways of delivering on the promise of unlimited internet access in and out of the home from a growing number of connected devices, Fon's relevance is quickly increasing," said Eran Rom, Jungo's CEO. "We are committed to helping drive the growth of the shared Wi-Fi community through our software implementations with operators. At the same time, we recognize the need for operators to realize tangible returns from Wi-Fi. Software that manages the security aspect of shared access is the key to these returns and enables operators to make a business out of shared connectivity."

Jungo has commercially deployed its Fon Wi-Fi sharing solution for several service providers worldwide including British Telecom (BT). Jungo has now implemented Fon for Zon in Portugal, so its subscribers are able to become part of the Fon community and access free Wi-Fi at Fon Spots worldwide.

About Fon

Fon was founded in 2006 by entrepreneur and internet pioneer, Martin Varsavsky with the goal of free, ubiquitous WiFi for everyone. Today, Fon is the largest WiFi community in the world, providing WiFi at over three million Fon hotspots and to over six million users. Fon also partners with the world's leading broadband providers, hardware manufacturers and Telco operators to offer Fon-ready products. Fon's investors include British Telecom, the Coral Group, Google, Index Ventures, Sequoia Capital and Skype.

About Jungo

Jungo Ltd., an NDS Group company, is a provider of broadband home value-added service solutions. Jungo's flagship products, OpenRG™ (residential gateway software platform) and OpenSMB™ (small and medium business gateway software platform) enable broadband operators

to deliver managed revenue-generating services to the digital home.

Jungo also offers extensive connectivity software solutions for USB and PCI, including WinDriver™, a driver development toolkit that enables developers to quickly create custom device drivers that can run on a multitude of operating systems without modification, and USBware™, a complete, high-quality embedded USB software protocol stack, allowing device manufacturers to easily incorporate standard USB OTG/Host /Device connectivity in their designs. To find out more about Jungo Ltd. and our products, please visit www.jungo.com.

About NDS

NDS Group Ltd. creates the technologies and applications that enable pay-TV operators to securely deliver digital content to TV STBs (set-top boxes), DVRs (digital video recorders), PCs, mobiles and other multimedia devices. Over 75 of the world's leading pay-TV platforms rely on NDS solutions to protect and enhance their businesses. VideoGuard[®] is the world's market-leading conditional access (CA) and digital rights management (DRM) technology, currently deployed on 145 million active devices, and safeguarding pay-TV service revenues exceeding \$50 billion. NDS middleware, including MediaHighway[®] which enables a host of advanced services for subscribers, has been deployed on 171 million devices. NDS DVR technology, centred around XTV[™], leads the global industry with 35 million units deployed. (Deployment figures as of 31st December 2010).

Headquartered in the UK, NDS remains committed to investing in R&D with over 75% of its employees dedicated to pioneering work at development centres in China, Denmark, France, India, Israel, Korea, UK and US. NDS has also implemented a host of initiatives aimed at reducing its carbon footprint and helping digital TV subscribers reduce energy consumption. NDS Group Ltd. is a private company owned by the Permira Funds and News Corporation. See www.nds.com for more information.

Fon Announces Its Integrated Support on Broadcom's DOCSIS® 3.0 Cable Gateway Solutions

Fon WiFi sharing technology becomes a standard feature in Broadcom's DOCSIS 3.0 cable modem and gateway SoCs

MADRID--(BUSINESS WIRE)--Fon, the world's largest WiFi network, today announced the industry's first Fon-ready Broadcom chipsets for DOCSIS® 3.0 devices, Broadcom Corporation is a global leader in semiconductors for wired and wireless communications. Broadcom's DOCSIS 3.0-based system-on-a-chip (SoC) solutions feature a software development kit (SDK) that enables manufacturers to build Fon functionality directly into their customer premises equipment (CPEs) without any additional development.

"Fon has built a WiFi network with over 2.5 million hotspots, and Telcos, ISPs and manufacturers are increasingly looking for ways to give their customers access to it," said Alex Puregger, Fon's COO. "We are pleased to work with Broadcom as they lead the way in integrating Fon at the chipset level."

"We are pleased to work with Broadcom as they lead the way in integrating Fon at the chipset level."

"We are pleased to offer our customers Fon WiFi sharing technology for the very latest in connectivity,"
said Brian Wheeler, Senior Product Line Manager at Broadcom. "Fon's WiFi network will enable consumers
to use and share their WiFi connection securely to enjoy videos, movies and games at WiFi speeds using only a small portion of their overall
bandwidth."

Broadcom's cable modem manufacturers, who buy the latest generation Broadcom chipsets, will receive the standard SDK with Fon software and other new features and fixes included. The SDK will allow manufacturers to customize new CPEs and easily upgrade their installed base of products and meet the specific demands of customers, like ISPs, who want to deliver Fon as a feature in their routers, in less time.

Fon currently partners with leading broadband service providers, hardware manufacturers and Telco operators, including British Telecom, Comstar-MTS Russia, SFR, and ZON Portugal who offer Fon-ready services.

About Fon:

Fon, founded by Martin Varsavsky, serial entrepreneur and internet pioneer, started the free WiFi revolution in 2006 with the first Fonera router and the goal of free, ubiquitous WiFi for everyone. Today, Fon is the largest WiFi community in the world, with over 2.5 million Fon WiFi spots and nearly 5 million users. British Telecom, Coral Group, Skype, Google, Index Ventures and Sequoia Capital are investors in Fon. Learn more at fon.com.

DOCSIS is a registered trademark of Cable Television Laboratories, Inc.

Wi-Fi gets wider with BT Total Broadband as O2 rations 3G

"We thought rationing ended in the 50s", says BT

BT today announced unlimited access to 1.5 million BT FON and BT Openzone

Wi-Fi hotspots across the UK for millions of BT Total Broadband users, including O2's mobile customers who are about to have their 3G access rationed as they upgrade to new devices. BT's move ensures that millions of people with smartphones, laptops, netbooks and burgeoning numbers of tablet computers, such as the iPad, can still have fast, reliable internet access when away from the home or office.

BT FON is a rapidly expanding Wi-Fi community of people who can take their broadband with them by sharing access securely with other BT FON members when out and about across the UK. BT Openzone is a Wi-Fi service that can be accessed in places such as airports, hotels, coffee shops, motorway service stations and city centres. Such is the scale of these networks' combined hotspots BT is now in the unique position of being able to offer Wi-Fi access in locations across the UK.

Previously, BT Total Broadband users had limits on Wi-Fi minutes available to use at BT FON and BT Openzone hotspots depending on their BT Total Broadband option. Recognising the growing need for internet access on the move, BT has now decided to offer unlimited Wi-Fi access across all BT Total Broadband options, to further consolidate as the UK's most complete broadband.

John Petter, consumer managing director, for BT Retail, said: "Because of the growing number of BT customers with mobile devices such as tablet computers and smartphones, we know that mobile access to the internet is needed more than ever before. Now that operators like O2 are rationing 3G, BT Total Broadband customers can find fast Wi-Fi connections all over the UK's towns and cities with unlimited internet access from 1.5 million hotspots.

"Our BT Fon and BT Openzone networks expanded by 800,000 hotspots during 2009 and we expect to have over 2.5m hotspots by the end of 2011. This continuing level of expansion means that these networks are rapidly becoming the simplest way for people to access the internet when out and about. And not only is this level of Wi-Fi coverage unique to BT, it's automatically included with our BT Total Broadband options."

BT will shortly unveil a downloadable application for BT Openzone and BT FON users that will make finding hotspots and moving between them even easier.

- Ends -

About BT

BT is one of the world's leading providers of communications solutions and services operating in more than 170 countries. Its principal activities include the provision of networked IT services globally; local, national and international telecommunications services to our customers for use at home, at work and on the move; broadband and internet products and services and converged fixed/mobile products and services. BT consists principally of four lines of business: BT Global Services, Openreach, BT Retail and BT Wholesale.

In the year ended 31 March 2010, BT Group's revenue was £20,911 million.

Fon wants you to help steal business from Starbucks and T-Mobile

February 21, 2007

Oh tricky, sneaky Fon. Fresh off their 10,000 Fonero giveaway, they're stepping up the ante with how they give away their loss-leader routers. Their newest campaign is sure to strike a chord with armchair entrepreneurs and Adbusters fans alike: if you live within the immediate vicinity of a Starbucks (read: WiFi range), Fon would like to send you one of their Foneros. Why? Because, if you recall, when you allow users to connect with your internet connection over your Fonero, Fon splits the profit with you -- \$1 for every user (who pays \$2 to use your connection). So for every \$10 T-Mobile / Starbucks WiFi user you swipe, Fon gives you a buck; now, granted this still isn't a scheme for those paranoid about home network security, bandwidth usage, or nefarious hax0rs type with a spoofed MAC and a keen eye for easy hotspot access, but who knows, for those near Starbucks (yes, they'll be checking against known locations) it might even be worth it to buy a budget DSL line just to profit with Fon.

About FON FON started the free WiFi revolution in 2006 with the first Fonera WiFi router and the goal of free, ubiquitous WiFi for everyone. Today, FON has the most innovative WiFi router in the world, the Fonera 2.0n, the largest WiFi community in the world with more than 1 million hotspots and over 1.8 million registered members, and a growing list of Telco partners who add FON functionality to their broadband routers. Google, eBay, British Telecom, Index Ventures, Coral Group and Sequoia Capital are investors in FON. To learn more, please visit http://www.fon.com.
